

SYSTEM AND METHOD FOR COLLABORATIVE PROCESSING OF DISTRIBUTED APPLICATIONS

ABSTRACT OF THE INVENTION

5

A system and operation is disclosed for collaborative processing of distributed applications. In a collaborative processing system, at least one application context is provided in which an application is executed. The context includes an application CGI for managing the application, and a communication interface on which application data is communicated as messages. A messaging bus is provided that is configured to communicate the messages for processing by the application.
